

Cleanliness Campaign...
Stop Water... Save Water...
Plant Trees... Save Trees...
That Is, Reduce Global Warming.

**UNIVERSAL NATURE
MULTITRADE CO OPRATION**

Green Give to Growth ,Golden Nature future

MISSION

Our Goal... Ten Thousand Crore Trees...

VISION

My Vision Is Everywhere...

Clean, Green, Happy Creation Is Everywhere...

OBJECTIVE

Reducing Global Warming, Reducing Pollution,
Harvesting Rain Water...

Nature Is The Future,
Hence It Is Your Responsibility And
Duty To Promote And Conserve It...

Among all animals, man is the most intelligent animal, he thinks he knows what to eat and drink, but this is not the real truth. Since he was born, he has only polluted this beautiful earth, contaminated food, contaminated water and even air! He has polluted it.

Food

It is obtained from the soil. To get maximum production from the soil, toxic food is contaminated by using maximum chemical fertilizers, pesticides.

Water

Chemicals in the fields, chemicals in industrial areas, due to that, chemicals in rivers and canals, chemical evaporation from the soil, water, therefore water is contaminated.

Air

Every breath of ours is polluted. The first thing we do when we are born is to breathe and the last thing we do in life is to breathe. In a sentence, the period between our first and last breath is called life. When breathing is so important in our life, are we sensitively aware of it? This is the question. Generally speaking, every person takes in an average of ten thousand liters of air into the lungs every day. From this, one thousand liters of oxygen mixes with the blood and then it travels in the blood through the hemoglobin in the blood cells. Oxygen is

essential for the whole body and from it the body gets 90% of its energy and only 10% of its energy is obtained from food and water. Air plays the basic and most important role in our life. Therefore, it is our right to get clean air every day for breathing. Clean air contains 78% nitrogen, 21% oxygen and less than 1% carbon dioxide, vapor and other gases. It is easy to talk about medical and natural scenes, but we have made all of them contaminated, polluted and impossible. Our lifestyle is very much like cooking, driving. Industrial sector work. Chemicals thrown in the fields, pesticides, crops burned. We are polluting the air with mosquito repellents and bath soaps, laundry soaps, washing powders, toilet cleaners, chemical liquids, etc. Unfortunately, this polluted air enters our lungs. There are two types of polluted air in our homes. 1. Pollution caused by the mixing of dangerous toxic gases in the air and secondly, pollution caused by fine and ultrafine dust particles in the air. Air-free air mainly contains high amounts of carbon dioxide, carbon monoxide, ozone, nitrogen oxides and sulfur oxides. These dust particles are so fine that they not only go deep into the lungs but also reach the blood vessels and reach various organs of the body. This pollution is dangerous for children, senior citizens, everyone, including lung infections, asthma, diseases that cause respiratory problems, cancer, heart, blood vessels and the brain. Air pollution is one of the causes of heart attacks.

Air pollution has increased the rate of allergies affecting the respiratory tract, eyes and skin. Air pollution is the cause of diabetes, obesity, unnecessary irritation, fatigue, and decreased immunity. Various factors are responsible for air pollution in our homes and outdoors. Road smoke, vehicle exhaust, dust, factories, chemical pesticides, crop and waste burning are degrading the air quality. Lighting mosquito repellent incense sticks at home is as dangerous as the fine dust produced by a hundred cigarettes. Lighting a single fragrant incense stick releases as much fine dust as five hundred cigarettes. Deodorant perfumes and floor cleaning fragrances are increasing the air pollution in the house at an alarming rate.

We are polluting the air on the streets, in public places, in offices, in tourist attractions, even from our homes. Every citizen of India is breathing polluted air every day, and its effects on our health are being felt. As a responsible citizen, we should plant trees that absorb pollutants, Money Plant, Snake Plant, Tulsa, Rubber Plant, Aloe Vera, Ashwagandha and big trees like Vad, Peepal, Bakam, Neem etc. Air pollution is a crisis directly related to our breath. On which our life depends. It is time to plan for it and work for clean air. Therefore, it is the responsibility and duty of every human being on the planet to maintain cleanliness, save water, plant trees and conserve nature.

The more people you help or the more people you encourage to plant trees for cleanliness campaign, water conservation (WH), reduce global warming, reduce pollution, the more honorarium + promotion you will get.

First month per person Rs.2000/- Further fixed payment

(You have to plant at least 5 trees every month, you will get payment for 12 months only if at least 5 people plant 5 trees and take selfies and upload them on ID.)

VALUABLE PRODUCT GIFT PACKAGES

Health Product
Grocery

₹ 5900/-

Health Product
FMCG Product

₹ 15000/-

Health Product
Bio Magnetic
Sleeping Matress

₹ 30,000/-

Health Product
Home Kitchen
Appliances

₹ 50,000/-

1,00,000/-
